### **Students using USB Drives for storing and printing data at DPCA**

Please note that computers in our school lab have Open Office installed on them. This means that **Open Office Writer** is the word processing software that can be used. Other word processing should translate into Writer in order to be printed, but students may wish to practice something small first to make sure it works. You can also get OpenOffice for free at home—ask Mr. R. if you need help.

Also, be sure to save your file in more than one place (**NOT** on the hard drive of school computers).

If this is all "Greek" to you, please ask one of your teachers, Mr. Ritschard or Mrs. Akers for help **BEFORE** you have reached a deadline and realize you cannot open your file here at school.
